

40 Mbps Advanced Dual PCM Bit Sync Mezzanine Model 674DM

The 674DM Advanced Digital PCM Bit Sync is a

state-of-the-art compact "mezzanine"

Features:

Two Independent Bit Syncs

* Mounts to 1632AP PCIe Dual Decom Multiple Program Controlled Inputs and Outputs Tunable Bit Rate Range

* 8 bps to 40 Mbps, all codes

Best in Class Noise Performance

* within 0.50 db of theoretical

Fast sync acquisition

* within 50 bit transitions, typical

Best in Class Sync Retention

* to 1024 bits without transition

Data Quality and Signal Test:

- * BERT / PRN BER Link Test Mode
- * Frame Sync PCM BER Monitor
- * Frame Lock/Loss Monitor
- * Eb/No Signal Quality Output
- * Viterbi Error Monitor / Stats
- * Data Simulator/Generator

Processes All IRIG Codes Remote Software Operations

GUI Setup and Operation status of all Acroamatics Bit Synchronizers are controlled via a single interface, with drop down menus for individual cards. The software automatically recognizes all available bit synchronizers, as well as their features.

Up to 20 unique setups are stored and available for instant bit sync configuration, supporting from one to 64 bit syncs apps.

ormance single slot PCI single card TM processing card products.

The 674DM is compatible with existing legacy and our latest

General Description

design that provides a cost

effective and modular high

quality bit sync add-on to Acroamatics entire line of

telemetry card components. Based on our 3rd generation bit sync design, it shares the latest techniques in FIR filtering, digital phase-locked loop, NCO clock reconstruction, and digital amplitude and offset control with its larger PCI cousin, the Model 1611P. Incorporating a leading-edge FPGA, this modern design delivers a significantly reduced parts count, improved reliability, and expanded capabilities - including options normally found only in box level and multi-card bit sync/ encoder designs. The 674DM supports options such as Frame Sync Pattern Verification, BERT, PRN and programmable PCM simulator, and Convolutional encode/decode.

The **Model 674DM** PCM Bit Sync is fully compatible with legacy Acroamatics TDP system and remote Bit Sync utility software set-ups, easily meeting and exceeding all IRIG performance and functional requirements.

Synchronization

Bit Rate Range 8 bps - 40 Mbps, All PCM Codes Tuning Resolution 0.1% of bit rate Capture Range 3 times the programmed loopwidth, typical Tracking Range ±12% typical, with programmable limiter Loop Bandwidth 0.1% to 3.2%, program selectable in 0.1% increments 0dB for NRZ-L and Biø-L codes Sync Threshold Sync Maintenance (LW=0.1%) -2dB NRZ-L and Biø-L codes (LW=1.6%, SNR > 12dB) Typically less than 50 bit periods (LW=0.1%, SNR > 3dB) Retains sync through > 1024 consecutive dropouts Sync Acquisition Sync Retention (LW=0.1%) to within 0.50 dB of ideal bit error rate performance curve Bit Error Rate

Program selectable: RNRZ 9/11/15/17/23, forward/re

20V max, Single-ended Hi-Z or 15V Max @ 75Ω . Tracks sinusoidal offsets to 100% p-p signal amplitude at 0.1% bit rate

Program selectable: NRZ-L/M/S, Biø-L/M/S, DBiø-M/S, DM-M/S, MDM-M/S, RZ

Data/Clock Outputs, NRZ-L Per Bit Sync

NRZ-L Data

Data Clock

Data Polarity

Óne each, NRZ-L data/clk pair, RS422/TTL (jumper, selectable) - operator program output selectable to INTERNAL (direct to host decom card via internal bus) or EXTERNAL (output pair directed to card external output BNC or Triax cables) 0°, 90°, 180°, 270°, operator program selectable Program selectable: normal/inverted

DATA/CLOCK OUTPUTS, CODE (DUAL PCM ENCODER) Per Bit Sync
Data Source
Outputs
Program selectable: Recovered Data (Bit Sync NRZ-L Data/Clk - DEFAULT) or External data/clock (PROGRAM SELECTABLE)
Three each: One each TTL data/clk (0° & 180°, selectable) Code (selectable) PCM and Clk, One each TTL data RNRZL, One each TAPE (code selectable) TTL or ±2 Volts balanced output, 50mA drive current Program selectable: RNRZ 9/11/15/17/23, forward, reverse Randomizer PCM Codes Program selectable: NRZ-L/M/S, Biø-L/M/S, DBiø-M/S, DM-M/S, MDM-M/S, RZ

Two (2) Inputs, Operator Program selectable, per Bit Sync Channel (Direct to companion decom & external)

Program selectable: Hi-Z/Lo-Z. Single Ended: $4k\Omega/75\Omega$ (std) or differential : 150 Ohm or Hi-Z (opt) 0.2 to 20V p-p, Single-ended. Differential: 0.2 to 10V p-p, Differential (optional)

External Data/Clock PCM Encoder Input Per Bit Sync

Greater than 60dB at 20MHz

Signal Type Impedance Data Code Data Clock

Jumper selectable: RS422 or TTL 120Ω RS422, 75Ω TTL Program selectable: NRZ-L/M/S, Biø-L/M/S, DBiø-M/S, DM-M/S, MDM-M/S, RZ Program selectable: Normal/Inverted, 1x or 2x

Convolution Encoder/Decoder (optional)

Rate 1/2, k=7: includes differential decoding, V.35 descrambling, and G2 invert (others available) Viterbi Decoder Symbol Formats Serial, parallel, and staggered parallel (others available) Rate 1/2, k=7: includes differential encoder, V.35 scrambler, and G2 inverter (others available) Convolutional Encoder Symbol Formats Serial, parallel, and staggered parallel (others available)

Program selectable: 1E3 to 1E9 bit periods, or continuous accumulate

Format Generators/Synchronizer (optional)

50mV to 5V P-P

Programmable frame length, sync pattern and mask Format Generator Synchronizer Source Recovered data, external data, or test generator Synchronizer Strategy Pattern match in "search", programmable error limits for "check" and "lock" states Other Features Bit slip enable, auto polarity enable, data source/ambiguity resolution

Program selectable: Bit Rate Clock or External Clock

Automatic pattern synchronization, forced error ON/OFF

Program selectable: 64, 128, 256 bits

Bit Error Rate Tester (optional) PRN sequence: PN7, PN9, PN11, PN15 (forward/reverse)

Transmitter Pattern Pattern Clock Source Blanking BER Sample Period Variable Output Other Features
